

MARWAN EL SAABI GONZÁLEZ

DATA SCIENCE & MACHINE LEARNING | MSC BIOINFORMATICS CANDIDATE

A Coruña, Spain | marwansaabi@gmail.com | +34 682 448 294 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFILE

MSc student with hands-on experience across the data stack: time-series demand forecasting, training and benchmarking supervised ML models, building LLM-powered applications, and relational data modelling. Seeking a data science internship where I can turn analytical work into production-ready tools.

TECHNICAL PROJECTS & SOFTWARE DEVELOPMENT

Retail Demand Forecasting | Python, LightGBM, Pandas, Streamlit

- Forecast weekly SKU-level demand four weeks ahead from 1M+ real e-commerce transactions, using a global gradient-boosting model with lag, rolling-window, price and calendar features.
- Validated with rolling-origin backtesting against naive, seasonal-naive and moving-average baselines, improving WMAPE by 4.8% over the strongest baseline.

Alzheimer's Drug Classifier (ML Virtual Screening) | Python, Scikit-learn, XGBoost, RDKit

- Built a virtual screening pipeline on ChEMBL bioactivity data (IC50), encoding molecules as 1024-bit Morgan fingerprints with class-imbalance correction.
- Benchmarked Random Forest, SVM, XGBoost and KNN under stratified 5-fold cross-validation, validating the winning model on held-out compounds with leakage control.

AI-Driven Generative Application (De Novo Drug Designer) | Python, Streamlit, Google Gemini API, RDKit

- Architected and deployed an interactive open-source web application for *de novo* molecular generation and 3D rendering.
- Integrated the Gemini API with an RDKit-based cheminformatics validation layer to filter chemically invalid molecular structures before 3D rendering.

RNA-seq Analysis Dashboard | Python, Streamlit, Plotly, Scikit-learn

- Built an interactive Streamlit dashboard for RNA-seq analysis: PCA, volcano/MA plots and heatmaps.
- Implemented differential expression analysis (Welch's t-test, Benjamini-Hochberg FDR correction) validated against a public dataset (Himes et al., 2014).

Relational Database Architecture | SQL, Data Modeling

- Designed an Entity-Relationship (ER) model and relational schema for a publishing organization.
- Defined robust primary/foreign key constraints and normalized data structures to ensure high-performance querying and data integrity.

PROFESSIONAL EXPERIENCE

- | | |
|--|------------------------|
| Logistics Delivery Driver / Temps Multiwork S.L.U. ETT | June 2026 to Present |
| Production Operator / Stellantis España S.L, Vigo | Oct 2024 to Oct 2025 |
| Seasonal Farmworker (Grape Harvest) / Iman Temporing ETT,S.L | Sept 2024 to Sept 2024 |

EDUCATION

- | | |
|---|-----------------------|
| University of A Coruña (Universidade da Coruña), A Coruña | Sept 2025 to Feb 2027 |
| MSc in Bioinformatics Applied to Health Sciences | |
| University of Vigo (Universidade de Vigo), Vigo | Sept 2019 to Jun 2023 |
| BSc in Biology (Specialization: Biotechnology) | |

AREAS OF EXPERTISE

- Programming & Data:** Python (NumPy, Pandas, OpenCV, Matplotlib), R (Tidyverse, ggplot2), SQL, Bash.
- Machine Learning:** Scikit-learn, XGBoost, Predictive Modeling, Supervised & Unsupervised Learning, Cross-Validation.
- Tools & Infrastructure:** Linux, Git/GitHub, Docker, Conda, High-Performance Computing (SLURM).

LANGUAGES

English, Spanish, Galician
